Quality, Environmental and Safety Policy

Dura Crete Quality, Environmental and Safety policy to comply entirely with the terms and conditions of each contract with the main Contractor/ Engineer/Client.s specification and applicable regulatory and legal requirements relating to the construction industry, the environment and safety.

Contractually requirements to complete the works according to specifications, in time and at agreed price are fundamental requirements of the construction Services industry and DURA CRETE will continue to meet those requirements.

DURA CRETE recognizes that its effectiveness in maintenance sufficient margin to invest in its processes is dependent on continually improving its teachings and competencies of its people so that the client's wishes shareholders profit and employer's expectations are fully realized by doing so potential client's will have no hesitation in negotiating further business with DURA CRETE.

During the execution of the works DURA CRETE is committed to reducing any nuisance to the community Preventing environmental pollution to the extent that is practically possible within the limits of each contract.

Management has committed DURA CRETE to the concept of continual improvement by setting company level quality, safety and environmental improvements objectives.

The objectives are communicated down through the organization so that each level understands its role in the achievement of the objectives.

Once branch and department level objectives are implemented, they will be reviewed against this policy and the results used to new goals.

This Policy is regularly reviewed by top management for continuing suitability and relevance and is available to the public on request.

INTRODUCTION QUALITY AND HSE POLICY

1.0 Introduction

DC LLC was established to deliver international standards and solutions for concrete repair and protective coating in the UAE and set the standards for the design and implementing of II forms or repair systems.

The Principals of the company have broad overall experience of building and civil engineering projects in the region that gives DC LLC a unique overview as to the real scope and need for concrete repair works in UAE.

Technical Commercial and operational management and staff are employed to provide many years experience at working in UK, EU, USA and middle east. Applying a basic understanding of the material together with specialist expertise and technical capabilities, DC LLC can determine the extent of concrete deterioration and recommend the most appropriate remedial repair.

Offering our customers quality of materials and confidence in performance, DC LLC provides repairs and enhancement that are effective,

durable and can be proven to extend the services life and performance of a facility.

Dura Crete activities are as follows:

1- Concrete Strengthening 5- Epoxy Coating 9- Grouting Works **6- Protective Coating** 2- Concrete Repair 10- Shot Crete Works 3- Crack Injection 7- Soil Enhancement (Micro Piles) 11- Guniting Works 4- Screed Works.

8- Structural Strengthening

DCC LCC operates in strict accordance with established standards, codes of practice and manufacturer's recommendations.

2.0 Quality Policy

DC LLC believes that its growth and profitability objectives in the supply and application of specialized construction materials will be met by a comprehensive commitment to quality in every aspect of the conduct of its business. This will be achieved by a total commitment from staff at all level within the organization. Therefore each employer realize their responsibility to quality and "Get it right the first time".

3.0 Health, Safety & Environmental Policy

DC LLC commitment to health, safety and environment: Everybody who works for Dura Crete LLC is responsible for getting HSE right, good HSE performance and security of everyone who works for us are critical to the success of our business.

"Our Goals are Simply Stated: No Accidents, No Harm and No Damages to the Environment".

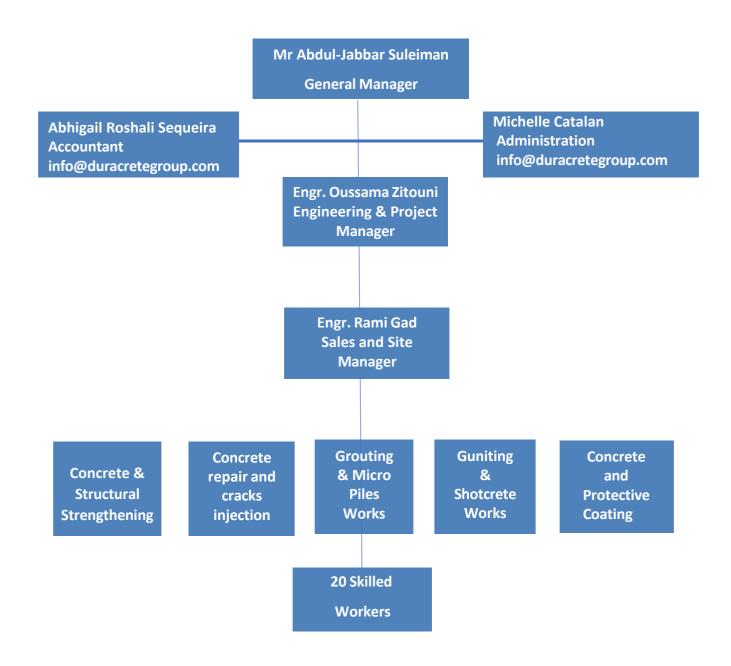

We will continue to drive down the environmental and health impact for our operations by reducing waste and using energy efficiency. We will produce quality work that can be used safely by our clients

Dura Crete LLC will:

- Comply with all groups, local, national, federal guidelines, laws, rules and regulation.
- Consult, Listen and respond openly to our customers, employees, public interest groups and those who works with us.
- Work with others our partners, suppliers, competitive and regulators to raise the standards of our industry.
- Openly report our performance, good and bad.
- Recognize those contribute to improve HSE performance.

ORGANIZATIONAL CHART

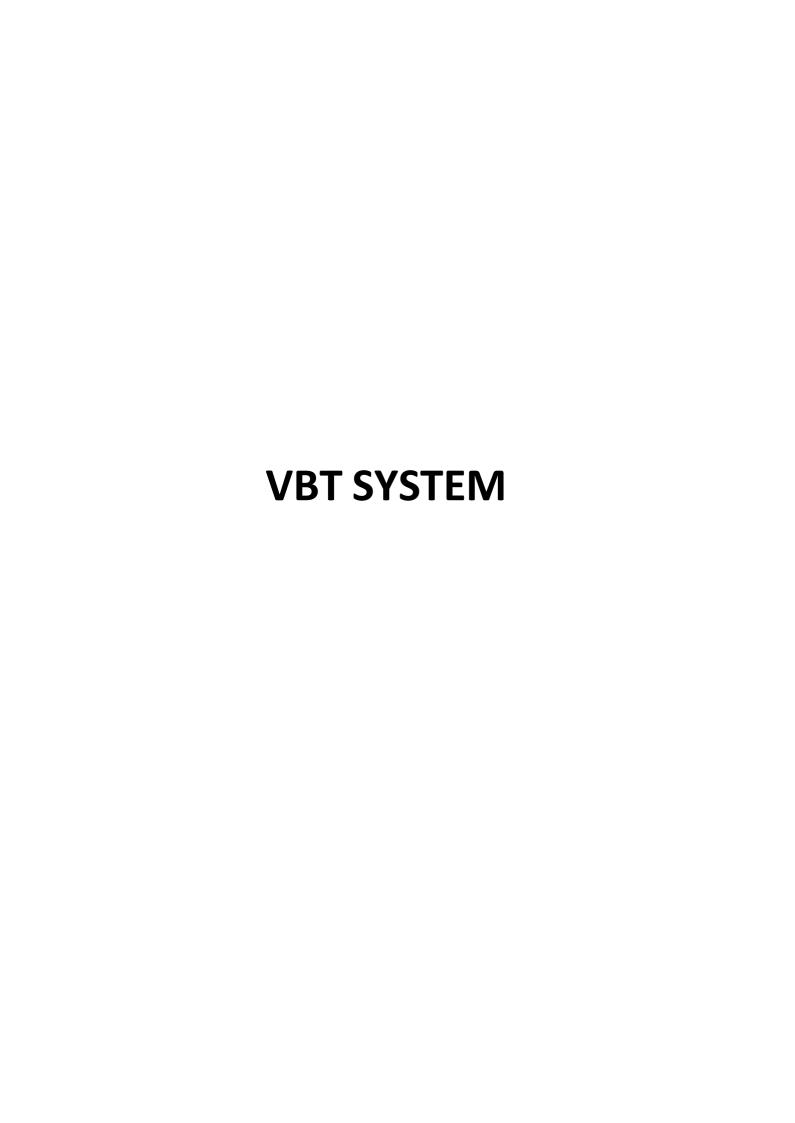

LIST OF EQUIPMENTS

Below is the list of equipments available for "Dura Crete LLC".

| Sr.No. | Equipment Description | Number Available |
|--------|------------------------------|------------------|
| 001. | One Component Injection Pump | 10 |
| 002. | Two Component Injection Pump | 6 |
| 003. | Heavy Duty Floor Grinder | 4 |
| 004. | Compressor | 5 |
| 005. | Grit Blasting Machine | 3 |
| 006. | Electronic Drills | 12 |
| 007. | Guniting Spray Machine | 6 |
| 008. | Handheld Grinders | 7 |
| 009. | Resin Mixing Machines | 5 |
| 010. | Floor Vacuum Machines | 3 |
| 011. | Coring Machine | 4 |
| 012. | Shotcrete Machine | 6 |
| 013. | Jet Grouting Machine | 4 |
| 014. | Power Floating | 6 |
| 015. | Screed Pump Machine | 1 |
| 016. | Cabling Machine | 1 |
| 017. | Anchoring Machine | 1 |

DC LLC has access to a larger number and other type of equipments depending on the projects type requirements. The company also employs sufficient number of Staff, Technician, and labors to undertake major projects.

SYSTEM OVERVIEW

"Cable internal" bonded strands internal post-tensioning

BI "BAND INTERNAL" BIA "BAND INTERNAL EXCHANGEABLE"

BE "Band external" bondless external post-tensioning, bandsystem

SC "Stay cable" bondless external post-tensioning, for large number of strands and high fatigue resistance

VBT-KI

Enns Bridge Austria

Motorway Lendava-Pince

TECHNICAL DATA

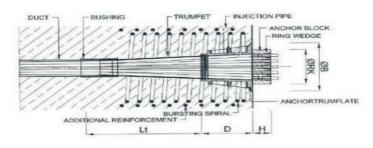

Identification:

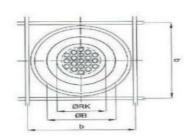

VBT-KI 'Cable internal'

Method of operation: •

- bonded strand post-tensioning system
- Main application:
- internal post-tensioning
- for new construction
- Advantages:
- large range of available anchorage sizes (4 to 19 strands)
- anchor plate and multi-surfache anchor available fixed and movable couplers using rugged bolts metal- and plastic-ducts available easy and fast assembly

- durable corrosion protection by cement grouted ducts
- Stressing forces:
- up to 19 strands in standard sizes (e.g. KI 19-150 for 3.6MN)
- > 19 strands on special request

BAND SIZES

(* exemplary stressing forces according DIN 1045-1, Y1770S7, 150mm²; actual stressing forces depend on the place of use and national standards

VORSPANN-BRÜCKENTECHNOLOGIE

The VBTsystems KI "Cable internal" represents the core system from the range of our post-tensioning systems. As a well known approved and established standard solution this bonded strand system was implemented multiple times in national and international context.

Using metal or plastic ducts the moment distribution along the construction can be followed exactly and the strands can be kept in place. After positioning the ducts the strands will be inserted by a special pushing machine. Normally in the next step the concrete is placed and after hardening the tendons can be stressed according the structural analysis or stressing directive.

After completion of the stressing works the remaining gap between duct and strands will be grouted using cement mortar. By full coverage of the single strands by the cement mixture the full and permanent corrosion protection will be ensured.

To provide a constant high quality grouting of the tendon in periodically distances along the duct vents need to be implemented, e.g. on points of maximum height along the tendon.

As a result of the mechanical bond between strand and duct differences in stressing forces of the tendon are directly transmitted into the surrounding concrete, e.g. effects of shrink and creep. If local failure of the tendon occurs, e.g. physical injury, outside the failure zone bond between strand and concrete is still in action. With the help of crack measurement tools and crack tracing programs local crack propagation can be discovered and associated to the corresponding tendons.

Thereby the internal bonded strand posttensioning method gives a rugged and reliable prestressing system, which offers on the basis of appropriate construction and accurate grouting a very effective long term behaviour.

Coupling anchor with bolts, during testing for official approval

TECHNICAL DATA

Identification: VBT-BI "Band internal"

VBT-BIA "Band internal exchangeable"

Method of operation: • monostrand prestressing system
Main application: • bondless internal post-tensioning

Advantages:
• modular system using bands, for simple and effective scaling

easy and fast assembly

large range of available anchorage sizes (1 to 16 strands)

durable corrosion protection

restressable, checkable
 fully exchangeable (BIA), limited exchangeable (BI)

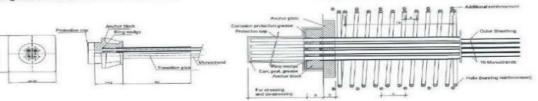

double sheathing (BIA), single sheathing (BI)

Stressing forces: • up to 3MN in standard sizes (e.g.: BIA 16-150 for 3MN)

> 3MN on special request

Longitudinal and cross section VBT-BI 4-150

QUALITY AND APPROVAL

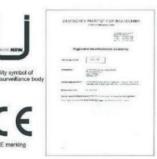

Our products are developed and manufactured by high quality standards and principles. Beside continuous in-house production control our factory is controlled by a state-approved and official authorized surveillance body. Using this kind of double quality check we can provide steady high quality and fulfill high quality requirements.

The VBT-KI 'Cable internal' is officially approved by national building authorities and is effective applied in international projects. Standards and regulations in the country of use needs to be considered in addition.

We see a milestone of quality assurace in the continuous obtainment of the technical approvals. By our further development of VBTsystems prestressing schemes we provide a significant contribution to the implementation of innovative prestressing systems worldwide.

General technical approval by the national building authority Z-13.1-126 DIBt Berlin, Germany

BAND SIZES

(selected summary of available band sizes) Sizes 8, 12 and 16 are drawn in 'Compact Position' (see corresponding VBTsystems data sheets)

VBT-BI 4 765kN*

VBT-BI 2x4 1530kN*

(* exemplary stressing forces according DIN 1045-1, Y1770S7, 150mm², actual stressing forces depend on the place of use and national standards)

VBT-BIA end anchorages, crossed-over haunched blocks

VORSPANN-BRÜCKENTECHNOLOGIE

VBT-BI anchorages 2 strands, placed in formwork

DEVELOPMENT AND MANUFACTURE

Our VBTsystems BI and BIA tension band systems mark out by rugged design and easy handling. By using coils of monostrands continuous tension bands without joints are produced. Providing this advantage it is possible to manufacture ready-to-place posttensioning systems, including pre-assembled anchorage body. The minimum amount of site work leads to a very cost effective solution,

By welding the single monostrands to a well

defined tension band, all the advantages of a modular post-tensioning band system are

Because of the layer-structure of VBT-BI "Band internal" and VBT-BIA "Band internal exchangeable" the construction design can consider effective and economically the needed prestressing force. For every design purpose the most effective type of band can be provided.

Monostrands in long lengths before manufacturing to VBT-BI/BIA tension bands

Assembled and prepared VBT-BI tension bands rolled to coils, cut to length, ready for transport

VBT-BIA tension bands ex works with double sheathing to provide fully exchangeability

VBT-BI/BIA are easy to adapt to irregular shapes; e.g. high-riser foundation, Germany

VBT-BE

TECHNICAL DATA

Identification:

VBT-BE "Band external"

Traun Bridge Bad Ischl

Method of operation: • monostrand prestressing system based on tension-bands

Main application:

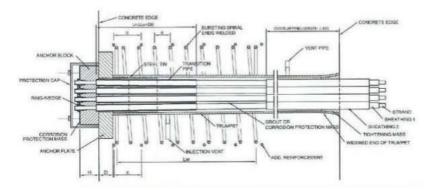

- bondless external post-tensioning
- for new construction and refurbishment/strengthening

Advantages:

- modular system using bands, for simple and effective scaling
- long length of continous bands (>700m without any coupling)
- easy and fast assembly
- geometrically exact deviation points using HDPE saddles
- durable corrosion protection
- restressable, exchangeable, checkable

Stressing forces:

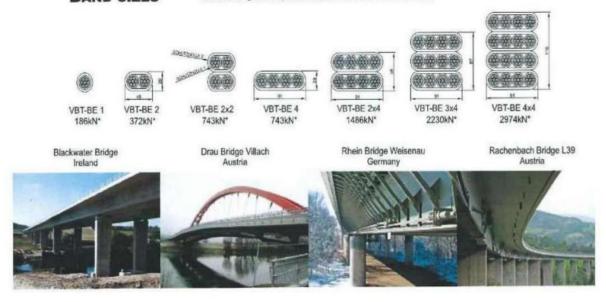

- up to 3MN in standard sizes (e.g.: BE 16-150 for 3MN)
- > 3MN on special request (e.g.: BE 28-150 for 5MN)

BAND SIZES

Zeceve Drage Croatia

DEVELOPMENT AND MANUFACTURE

Our VBTsystems VBT-BE tension band system marks out by rugged design and easy handling. By using coils of monostrands high length tension bands are produced (>700m). Providing this very long tension bands it becomes possible to realize cost optimized projects with a minimum quantity of end- and intermediate anchorages.

By the outer additional sheathing a clear defined tension band is formed. All the advantages of a modular post-tensioning band system are given.

Utilizing the band-wise design of VBT-BE tension bands a well calculated and cost efficient determination of prestressing forces is permitted.

Because of the straightforwardness of VBT-BE tension-bands construction design modifications can be implemented in time. Thus we can easily take care of changing basic conditions and react to special customer requirements.

SHORT DESCRIPTION

Large spans and special construction methods require high standards on the type of prestressing system. Due to this demand in construction system we developed and designed our VBT-SC "Stay Cable". This system is a modified version of our proven prestressing systems VBT-BE "Band external" and VBT-KI "Cable internal".

The VBT-SC is available in a large variety of strand numbers and adapted matching anchorage sizes. So we ensure to provide the most cost efficient cable solution and anchorage system to the particular demand in design.

Our VBT-SC is designed and manufactured according international standards and regulations, tests of the anchorages were carried out conform fib bulletins, pti recommondations and ETAG 013. The resistance to fatigue is provided by a VBT-developed and patent pending special device construction to meet the highest requirements.

The simplest VBT-SC system is designed for fatigue stress cycles of 200N/mm² (2x10° load cycles at 0.45 GUTS). There are additional versions of our anchorage system for fatigue levels of 250N/mm² and 300N/mm² available, which fulfil the highest demands in safety and ultimate quality needs. According the particular type of application we provide the appropriate concept of construction method.

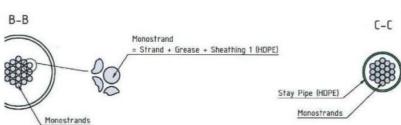

For temporary restraints we offer a cost efficient and in regard to the corrosion protection optimised system of stay cables. For challenging stay cable projects like large river or offshore sea bridges a complex sealing system comes to application, which fuffills all take for a robust and simple system in harsh and rugged environmental conditions.

Using an intensive tested, proven and sophisticated system for stay cable systems our VBT-SC belongs to the most remarkable stay cable systems on the market.
